After publishing several other books, Turchin brought out Ages of Discord in 2016, as the U.S. election was about to deliver Trump to the White House. Turchin is a major exponent of cliodynamics, a new discipline which applies mathematical modelling to historical events and finds that its formulas work both ways in time: they can "retrodict" past events and predict future ones. I have some issues with structural-demographic theory: it relies too heavily on a very few factors like wages; it underrates the long-term benefits of migration; and it treats national elites as the only real agents of historical change. Despite these objections, I found Turchin's arguments generally persuasive and thought-provoking. Read Tales of Discord Now!
