During middle childhood, children develop a sense of self-esteem and individuality, comparing themselves with their peers. They come to expect they will succeed or fail at different tasks. They may develop an orientation toward achievement that will color their response to school and other challenges for many years. In early adolescence, the tumultuous physical and social changes that accompany puberty, the desire for autonomy and distance from the family, and the transition from elementary school to middle school or junior high can all cause problems for young people. "There has been a revolution in the study of child development. The editors have assembled a set of readable and authoritative summaries of key advances in the field, ranging from brain to behavior and theory to practice. This is a unique guide to the fascinating, surprising, and useful discoveries about children that have emerged in the scientific literature. It teaches us not only about children, but about how we become who we are as adults." Andrew N. Meltzoff - Co-author, *The Scientist in the Crib*. Loading metrics The intellectual development of children, anyone who wants to be able to make lofty dreams and realize them, must ensure that they are familiar with creativity. Creativity is a factor in teaching independent thinking. After a comprehensive study of the problem of organizing the creative work of students in primary school, we came to the following conclusions: "In the primary grades, it is possible to understand that deep meaning and logic in the creativity of students is not at the required level." "The organization of problem-based learning is an important factor in the development of students' creativity. Each student can demonstrate a certain level of creativity in their learning activities. Creativity is not the same thing as intellectual ability.
