Critique of Pure Reason. Immanuel Kant. Prefaces and Introduction. A xxi. I hope to present such a system of pure (speculative) reason, under the title Metaphysics of Nature. It won't be half as long as the present book, this critique, but it will be incomparably richer in content. The present work has as its first task to lay bare what makes this sort of critique possible, and what the conditions are under which it is possible; so it has had to take some weed-cluttered ground and make it clear and level. Source: Critique of Pure Reason (1787). Norman Kemp Smith version from Chinese University of Hong Kong, with text of Kant's second edition extracted. The four files reproduced here, cover all of Kant's introduction which succinctly explains his basic approach, plus another excerpt from early on in the work, an important section where he explains his reaction to Hume and the section on 'Antinomies of Reason' which is important when it comes to Hegel. It is precisely by means of the latter modes of knowledge, in a realm beyond the world of the senses, where experience can yield neither guidance nor correction, that our reason carries on those enquiries which owing to their importance we consider to be far more important than those of the senses. Within the pages of this text, Immanuel investigates the limits of reasoned thinking (what is also called "reason" and spoken of anthropomorphically as though it were itself a subject) in seeking a general scientific grounding to both philosophy and natural science itself. Kant is difficult. For some reason I remember this audio book being the worst one I ever listened to. I almost abandoned it because a lot of the time I felt like I wasn't getting anything out of it, like someone was reading something REALLY boring and annoying. I do not mean by this a criticism of books and systems, but a critical inquiry into the faculty of reason, with reference to the cognitions to which it strives to attain without the aid of experience; in other words, the solution of the question regarding the possibility or impossibility of meta-physics, and the determination of the origin, as well as the nature of the conceptions of pure reason.
